LAWN CARE EQUIPMENT

ROBOT

Application

The Robot series 2 wheel universal garden tractor is available with the choice of a 6.5Hp or a 13.5Hp Briggs & Stratton intek engines and offers unbeatable flexibility with the ability to add implements as your needs change. There is a wide range of modular front and rear mounted implements available which include implements for ploughing, sowing, cultivation, mowing and material handling applications. The Robot universal garden tractors reputation has been built on supplying durable, reliable and easy to maintain units. Perfect for small holdings, lifestyle blocks and agricultural operations where intensive cultivation is desired and space is at a premium.

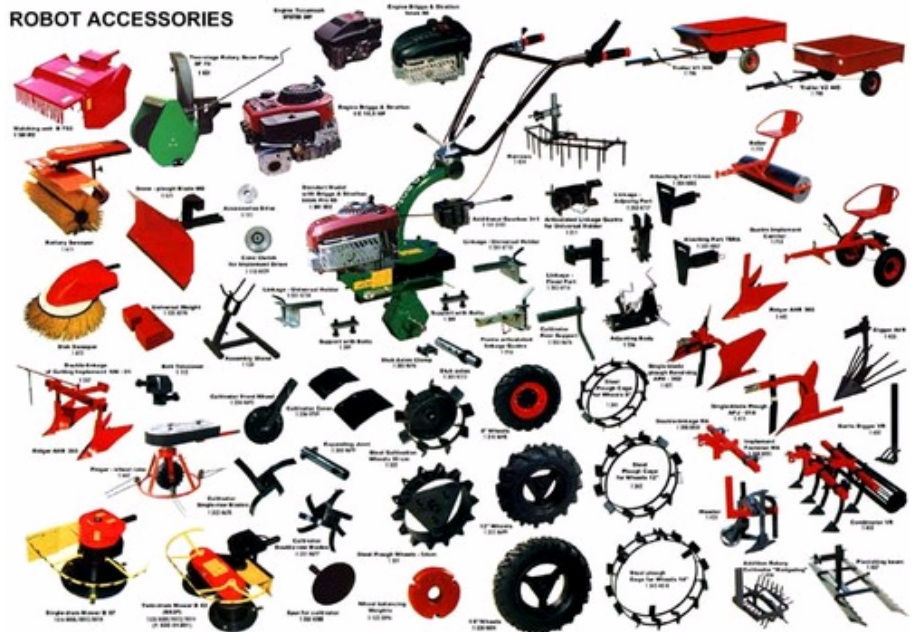

Key Features

2 Wheel Universal Garden Tractor

- Quality Briggs and Stratton 6.5Hp or 13.5Hp Intek OHV engine.
- Heavy duty construction with cast housing.
- Primary transfer with 2 speed gearbox incorporating V belt.
- Easy to fit optional 3+1 gearbox available for extra speed control.
- Lamella clutch with ceramic lining.
- Heavy duty bevel gear drive train.
- Alternative wheel sizes available from 8 to 14".
- Power take off operates through a cone clutch.
- Flexible linkages for fitting a wide variety of impliments.
- Handlebars with adjustable rake and reach.

The modular construction system incorporated into the Robot machine offers value unequalled by any other manufacturer and can offer substantial initial and operational savings. The modular construction system is particularly advantageous in allowing a number of configurations to be built around one chassis. The standard model has a two speed shuttle transmission up rated by the mounting of an additional gearbox to provide a six forward speed and two speed reverse configuration.
